

Economic Impact Analysis Report for Calloway County, Kentucky

The local economy is a complex system that involves the interaction of numerous individuals and firms across different industries. Often times, firms will buy their inputs from local suppliers and will sell their output to other local firms. Though these linkages among local firms can be complex in and of themselves, the local economy also includes consumption by local residents, local retailers, and service providers. When one also considers the possibility that goods and services are imported to and exported from the locale, and the contribution of local and state governments to the economy, the intricacies of the local economy are self-evident.

Economic impact analysis is a powerful tool in demonstrating how a particular firm or industry impacts a local economy. Since firms within a region are linked together through input and output relationships, the analysis traces how changes in one industry will affect the others in the economy. The changes in the local economy are often measured in terms of employment and income, and the changes can be classified as three distinct impacts: direct, indirect, and induced. For the purposes of this report, income will include employee compensation and proprietors' income.

The direct impact represents actual employment of, or income generated by, the industry under analysis in a particular county. Given that the analyzed industry likely purchases inputs from other local industries, the indirect impact estimates the number of jobs, and income generated, in these linked industries that attribute to the industry undergoing analysis. For example, restaurants will purchase fresh bread from a local bakery. This demand generated by the restaurants may cause the local bakery to increase its employment, and hence its payroll. However, the local bakery will also serve other industries, such as the local grocers. Therefore, the indirect impacts also estimate the number of employees of the linked industry needed to supply the analyzed industry. Household income is generated by the employment counted in the direct and indirect impacts. The induced impact estimates the number of jobs in the local economy that result from the spending of the direct income, to the extent that such consumption occurs locally. The total impact, then, is the sum of direct, indirect and induced employment or income impact for the sector.

To begin our analysis of Calloway County, consider the composition of the local economy. Figure 1, on page 3, presents two pie charts, each depicting the proportion of local employment and income that each industry represents. The table below the two pie charts presents the direct employment and income numbers for each industry in the pie charts. Income per employee is also reported as a proxy for average wages across industries. For the purposes of this report, industries are defined using the North American Industrial Classification System (NAICS) 2-digit codes. All public sector employment and income (regardless of source, whether local, state or federal; this includes public primary and secondary schools, as well as public colleges and universities) is represented in Sector 92: Public Administration. Private schools of any kind are included under Sector 61: Educational Services.

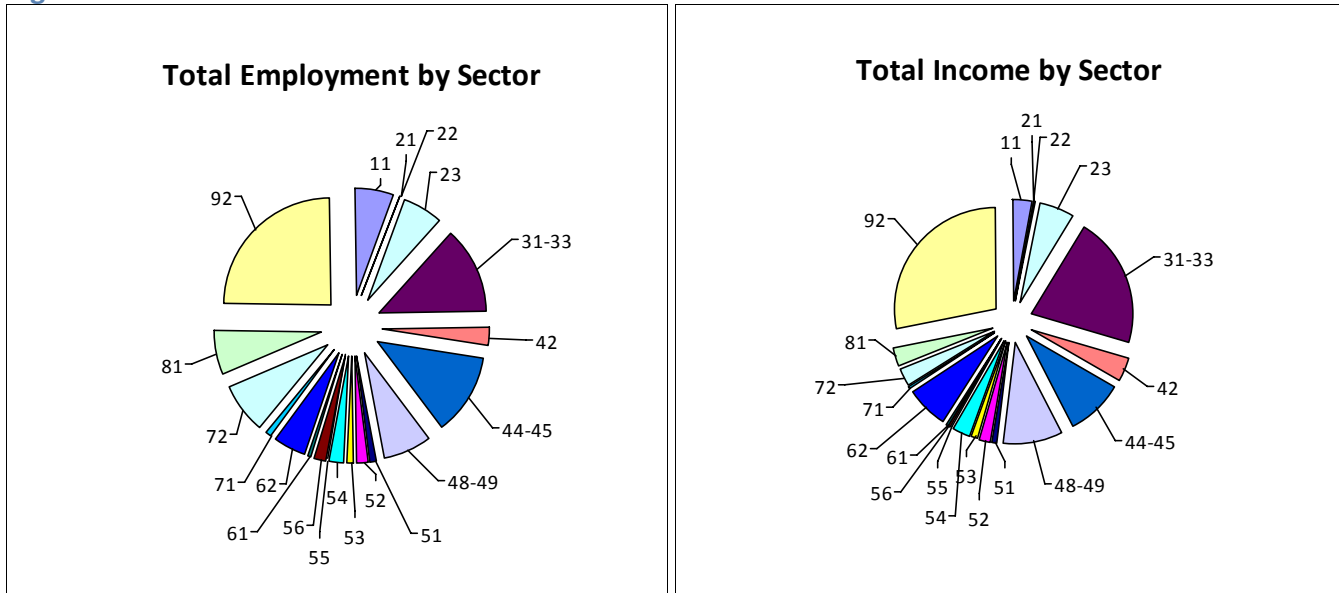

After page three, this report details the direct, indirect and induced employment and income for each of the nineteen private sectors and a government sector of the local economy. Perhaps the simplest way to analyze the indirect and induced contributions of a given industry to Calloway County's economy is to examine a scenario in which that industry's production no longer existed. Without the given sector, not only would direct employment and income fall, but there would be less local demand for certain inputs and services (i.e., an indirect impact) and less household and government spending (i.e., an induced impact). We can approximate how the entire local economy would be affected if a single industry's production did not take place locally using IMPLAN, a computer software product designed to conduct economic impact analysis.

In the following pages, we examine how the local economy would be affected if each sector in the local economy were eliminated one at a time. Readers will find a narrative that briefly describes each industry's economic contribution to the community and a table summarizing the three different impacts measured in this analysis. Income per employee by impact type is also reported to help readers quickly compare the relative contribution each industry makes to the local community. Comparing the income per employee from the direct impact across sectors indicates job quality (i.e., high or low paying jobs), whereas comparing the income per employee for indirect impacts suggests how strongly connected the industry under analysis is to other sectors in the county. The induced income per employee figure primarily reflects the diversity in the community's retail and services sector -- this will tend to be higher across all sectors when many shopping opportunities exist locally, and it will be higher for those sectors with higher paying direct employment.

Figure 1

NAICS	Industry Title	Direct Employment	Direct Income	Income per Employee
92	Public Administration	5,295	\$173,090,416	\$32,689
31-33	Manufacturing	2,792	\$126,987,728	\$45,486
44-45	Retail Trade	2,554	\$56,079,568	\$21,961
72	Accommodation and Food Services	1,635	\$18,633,690	\$11,400
48-49	Transportation and Warehousing	1,501	\$55,981,856	\$37,309
81	Other Services (except Public Administration)	1,382	\$16,771,097	\$12,135
23	Construction	1,258	\$35,387,832	\$28,126
11	Agriculture, Forestry, Fishing and Hunting	1,244	\$19,371,190	\$15,573
62	Health Care and Social Assistance	1,044	\$40,771,092	\$39,057
42	Wholesale Trade	561	\$21,991,204	\$39,186
54	Professional, Scientific, and Technical Services	442	\$15,905,590	\$35,994
52	Finance and Insurance	340	\$11,291,498	\$33,220
56	Administrative and Support and Waste Management and Remediation Services	328	\$4,500,727	\$13,722
53	Real Estate and Rental and Leasing	282	\$5,907,437	\$20,919
51	Information	172	\$4,903,646	\$28,526
71	Arts, Entertainment, and Recreation	171	\$1,985,902	\$11,600
61	Educational Services	120	\$910,450	\$7,593
21	Mining	3	\$135,919	\$50,340
55	Management of Companies and Enterprises	3	\$190,713	\$76,285
22	Utilities	1	\$88,985	\$63,561
	Total	21,127	\$610,886,540	\$28,916

The Economic Impacts of Agriculture, Forestry, Fishing and Hunting in Calloway County, Kentucky

In 2004, combined Agriculture, Forestry, Fishing and Hunting employment in the county totaled 1,244 workers, generated \$19,371,190 in local income. As illustrated below, Agriculture, Forestry, Fishing and Hunting accounts for about 5.89 percent of county employment and 3.17 percent of county income in Calloway county. For comparison, in the Commonwealth of Kentucky, Agriculture, Forestry, Fishing and Hunting presents 5.33 percent of state employment and 1.40 percent of state income.

The elimination of 1,244 Agriculture, Forestry, Fishing and Hunting jobs would result in an additional 959 jobs lost in related industries. In terms of income, eliminating Agriculture, Forestry, Fishing and Hunting would amount to a direct income loss of \$19,371,190 plus an additional \$25,208,237 loss in other local sectors. Combining the direct, indirect and induced effects, then, measures the total impact of Agriculture, Forestry, Fishing and Hunting in the county.

Impact Analysis Results for Agriculture, Forestry, Fishing and Hunting*

	Employment	Income	Income per Employee
Direct Impact Measures the employment lost from the elimination of Agriculture, Forestry, Fishing and Hunting.	1,244	\$19,371,190	\$15,573
Indirect Impact Firms within Agriculture, Forestry, Fishing and Hunting will purchase at least some of their inputs from other firms located in the region, thereby causing the supplier firms to purchase resources and hire workers to meet this demand. These purchases from supplier firms are called the indirect impacts.	290	\$6,671,937	\$23,038
Induced Impact The personal income generated by the direct and indirect impacts will result in household spending in the study area; this household spending is called the induced impact.	669	\$18,536,300	\$27,699
Total Impact The sum of the direct, indirect and induced impacts.	2,203	\$44,579,428	\$20,239

*This analysis was performed using 2004 data and software (version 2.0.1025) from the Minnesota IMPLAN Group, Inc. All dollar values are expressed in 2004 dollars, employment numbers represent full-time equivalents (FTE), and industrial classifications are based upon the North American Industrial Classification System (NAICS).

The Economic Impacts of Mining in Calloway County, Kentucky

In 2004, combined Mining employment in the county totaled 3 workers, generated \$135,919 in local income. As illustrated below, Mining accounts for about 0.01 percent of county employment and 0.02 percent of county income in Calloway county. For comparison, in the Commonwealth of Kentucky, Mining presents 1.01 percent of state employment and 1.73 percent of state income.

The elimination of 3 Mining jobs would result in an additional 5 jobs lost in related industries. In terms of income, eliminating Mining would amount to a direct income loss of \$135,919 plus an additional \$150,172 loss in other local sectors. Combining the direct, indirect and induced effects, then, measures the total impact of Mining in the county.

Impact Analysis Results for Mining*

	Employment	Income	Income per Employee
Direct Impact Measures the employment lost from the elimination of Mining.	3	\$135,919	\$50,340
Indirect Impact Firms within Mining will purchase at least some of their inputs from other firms located in the region, thereby causing the supplier firms to purchase resources and hire workers to meet this demand. These purchases from supplier firms are called the indirect impacts.	1	\$26,204	\$32,755
Induced Impact The personal income generated by the direct and indirect impacts will result in household spending in the study area; this household spending is called the induced impact.	5	\$123,968	\$27,548
Total Impact The sum of the direct, indirect and induced impacts.	8	\$286,091	\$35,761

**This analysis was performed using 2004 data and software (version 2.0.1025) from the Minnesota IMPLAN Group, Inc. All dollar values are expressed in 2004 dollars, employment numbers represent full-time equivalents (FTE), and industrial classifications are based upon the North American Industrial Classification System (NAICS).*

The Economic Impacts of Utilities in Calloway County, Kentucky

In 2004, combined Utilities employment in the county totaled 1 workers, generated \$88,985 in local income. As illustrated below, Utilities accounts for about 0.01 percent of county employment and 0.01 percent of county income in Calloway county. For comparison, in the Commonwealth of Kentucky, Utilities presents 0.26 percent of state employment and 0.60 percent of state income.

The elimination of 1 Utilities jobs would result in an additional 2 jobs lost in related industries. In terms of income, eliminating Utilities would amount to a direct income loss of \$88,985 plus an additional \$57,277 loss in other local sectors. Combining the direct, indirect and induced effects, then, measures the total impact of Utilities in the county.

Impact Analysis Results for Utilities*

	Employment	Income	Income per Employee
Direct Impact Measures the employment lost from the elimination of Utilities.	1	\$88,985	\$63,561
Indirect Impact Firms within Utilities will purchase at least some of their inputs from other firms located in the region, thereby causing the supplier firms to purchase resources and hire workers to meet this demand. These purchases from supplier firms are called the indirect impacts.	0	\$5,453	\$27,265
Induced Impact The personal income generated by the direct and indirect impacts will result in household spending in the study area; this household spending is called the induced impact.	2	\$51,824	\$27,276
Total Impact The sum of the direct, indirect and induced impacts.	4	\$146,263	\$41,789

**This analysis was performed using 2004 data and software (version 2.0.1025) from the Minnesota IMPLAN Group, Inc. All dollar values are expressed in 2004 dollars, employment numbers represent full-time equivalents (FTE), and industrial classifications are based upon the North American Industrial Classification System (NAICS).*

The Economic Impacts of Construction in Calloway County, Kentucky

In 2004, combined Construction employment in the county totaled 1,258 workers, generated \$35,387,832 in local income. As illustrated below, Construction accounts for about 5.96 percent of county employment and 5.79 percent of county income in Calloway county. For comparison, in the Commonwealth of Kentucky, Construction presents 6.15 percent of state employment and 5.98 percent of state income.

The elimination of 1,258 Construction jobs would result in an additional 1,248 jobs lost in related industries. In terms of income, eliminating Construction would amount to a direct income loss of \$35,387,832 plus an additional \$34,553,737 loss in other local sectors. Combining the direct, indirect and induced effects, then, measures the total impact of Construction in the county.

Impact Analysis Results for Construction*

	Employment	Income	Income per Employee
Direct Impact Measures the employment lost from the elimination of Construction.	1,258	\$35,387,832	\$28,126
Indirect Impact Firms within Construction will purchase at least some of their inputs from other firms located in the region, thereby causing the supplier firms to purchase resources and hire workers to meet this demand. These purchases from supplier firms are called the indirect impacts.	464	\$13,120,561	\$28,271
Induced Impact The personal income generated by the direct and indirect impacts will result in household spending in the study area; this household spending is called the induced impact.	784	\$21,433,176	\$27,328
Total Impact The sum of the direct, indirect and induced impacts.	2,507	\$69,941,571	\$27,904

**This analysis was performed using 2004 data and software (version 2.0.1025) from the Minnesota IMPLAN Group, Inc. All dollar values are expressed in 2004 dollars, employment numbers represent full-time equivalents (FTE), and industrial classifications are based upon the North American Industrial Classification System (NAICS).*

The Economic Impacts of Manufacturing in Calloway County, Kentucky

In 2004, combined Manufacturing employment in the county totaled 2,792 workers, generated \$126,987,728 in local income. As illustrated below, Manufacturing accounts for about 13.21 percent of county employment and 20.79 percent of county income in Calloway county. For comparison, in the Commonwealth of Kentucky, Manufacturing presents 11.4 percent of state employment and 18.54 percent of state income.

The elimination of 2,792 Manufacturing jobs would result in an additional 8,785 jobs lost in related industries. In terms of income, eliminating Manufacturing would amount to a direct income loss of \$126,987,728 plus an additional \$256,003,062 loss in other local sectors. Combining the direct, indirect and induced effects, then, measures the total impact of Manufacturing in the county.

Impact Analysis Results for Manufacturing*

	Employment	Income	Income per Employee
Direct Impact Measures the employment lost from the elimination of Manufacturing.	2,792	\$126,987,728	\$45,486
Indirect Impact Firms within Manufacturing will purchase at least some of their inputs from other firms located in the region, thereby causing the supplier firms to purchase resources and hire workers to meet this demand. These purchases from supplier firms are called the indirect impacts.	4,056	\$125,860,111	\$31,028
Induced Impact The personal income generated by the direct and indirect impacts will result in household spending in the study area; this household spending is called the induced impact.	4,729	\$130,142,951	\$27,521
Total Impact The sum of the direct, indirect and induced impacts.	11,577	\$382,990,791	\$33,082

**This analysis was performed using 2004 data and software (version 2.0.1025) from the Minnesota IMPLAN Group, Inc. All dollar values are expressed in 2004 dollars, employment numbers represent full-time equivalents (FTE), and industrial classifications are based upon the North American Industrial Classification System (NAICS).*

The Economic Impacts of Wholesale Trade in Calloway County, Kentucky

In 2004, combined Wholesale Trade employment in the county totaled 561 workers, generated \$21,991,204 in local income. As illustrated below, Wholesale Trade accounts for about 2.66 percent of county employment and 3.60 percent of county income in Calloway county. For comparison, in the Commonwealth of Kentucky, Wholesale Trade presents 3.35 percent of state employment and 4.99 percent of state income.

The elimination of 561 Wholesale Trade jobs would result in an additional 677 jobs lost in related industries. In terms of income, eliminating Wholesale Trade would amount to a direct income loss of \$21,991,204 plus an additional \$18,701,419 loss in other local sectors. Combining the direct, indirect and induced effects, then, measures the total impact of Wholesale Trade in the county.

Impact Analysis Results for Wholesale Trade*

	Employment	Income	Income per Employee
Direct Impact Measures the employment lost from the elimination of Wholesale Trade.	561	\$21,991,204	\$39,186
Indirect Impact Firms within Wholesale Trade will purchase at least some of their inputs from other firms located in the region, thereby causing the supplier firms to purchase resources and hire workers to meet this demand. These purchases from supplier firms are called the indirect impacts.	112	\$2,909,023	\$26,020
Induced Impact The personal income generated by the direct and indirect impacts will result in household spending in the study area; this household spending is called the induced impact.	566	\$15,792,396	\$27,926
Total Impact The sum of the direct, indirect and induced impacts.	1,239	\$40,692,622	\$32,856

**This analysis was performed using 2004 data and software (version 2.0.1025) from the Minnesota IMPLAN Group, Inc. All dollar values are expressed in 2004 dollars, employment numbers represent full-time equivalents (FTE), and industrial classifications are based upon the North American Industrial Classification System (NAICS).*

The Economic Impacts of Retail Trade in Calloway County, Kentucky

In 2004, combined Retail Trade employment in the county totaled 2,554 workers, generated \$56,079,568 in local income. As illustrated below, Retail Trade accounts for about 12.09 percent of county employment and 9.18 percent of county income in Calloway county. For comparison, in the Commonwealth of Kentucky, Retail Trade presents 10.31 percent of state employment and 6.40 percent of state income.

The elimination of 2,554 Retail Trade jobs would result in an additional 1,660 jobs lost in related industries. In terms of income, eliminating Retail Trade would amount to a direct income loss of \$56,079,568 plus an additional \$45,506,237 loss in other local sectors. Combining the direct, indirect and induced effects, then, measures the total impact of Retail Trade in the county.

Impact Analysis Results for Retail Trade*

	Employment	Income	Income per Employee
Direct Impact Measures the employment lost from the elimination of Retail Trade.	2,554	\$56,079,568	\$21,961
Indirect Impact Firms within Retail Trade will purchase at least some of their inputs from other firms located in the region, thereby causing the supplier firms to purchase resources and hire workers to meet this demand. These purchases from supplier firms are called the indirect impacts.	301	\$7,693,049	\$25,533
Induced Impact The personal income generated by the direct and indirect impacts will result in household spending in the study area; this household spending is called the induced impact.	1,358	\$37,813,188	\$27,837
Total Impact The sum of the direct, indirect and induced impacts.	4,213	\$101,585,808	\$24,111

**This analysis was performed using 2004 data and software (version 2.0.1025) from the Minnesota IMPLAN Group, Inc. The Economic Impacts of Transportation and Warehousing in Calloway County, Kentucky

In 2004, combined Transportation and Warehousing employment in the county totaled 1,501 workers, generated \$55,981,856 in local income. As illustrated below, Transportation and Warehousing accounts for about 0.01 percent of county employment and 0.03 percent of county income in Calloway county. For comparison, in the Commonwealth of Kentucky, Transportation and Warehousing presents 4.66 percent of state employment and 6.31 percent of state income.

The elimination of 1,501 Transportation and Warehousing jobs would result in an additional 1,842 jobs lost in related industries. In terms of income, eliminating Transportation and Warehousing would amount to a direct income loss of \$55,981,856 plus an additional \$51,198,416 loss in other local sectors. Combining the direct, indirect and induced effects, then, measures the total impact of Transportation and Warehousing in the county.

Impact Analysis Results for Transportation and Warehousing*

	Employment	Income	Income per Employee
Direct Impact			
Measures the employment lost from the elimination of Transportation and Warehousing.	1,501	\$55,981,856	\$37,309
Indirect Impact

The Economic Impacts of Information in Calloway County, Kentucky

In 2004, combined Information employment in the county totaled 172 workers, generated \$4,903,646 in local income. As illustrated below, Information accounts for about 0.81 percent of county employment and 0.80 percent of county income in Calloway county. For comparison, in the Commonwealth of Kentucky, Information presents 1.37 percent of state employment and 1.66 percent of state income.

The elimination of 172 Information jobs would result in an additional 237 jobs lost in related industries. In terms of income, eliminating Information would amount to a direct income loss of \$4,903,646 plus an additional \$6,476,811 loss in other local sectors. Combining the direct, indirect and induced effects, then, measures the total impact of Information in the county.

Impact Analysis Results for Information*

	Employment	Income	Income per Employee
Direct Impact Measures the employment lost from the elimination of Information.	172	\$4,903,646	\$28,526
Indirect Impact Firms within Information will purchase at least some of their inputs from other firms located in the region, thereby causing the supplier firms to purchase resources and hire workers to meet this demand. The Economic Impacts of Finance and Insurance in Calloway County, Kentucky

In 2004, combined Finance and Insurance employment in the county totaled 340 workers, generated \$11,291,498 in local income. As illustrated below, Finance and Insurance accounts for about 1.61 percent of county employment and 1.85 percent of county income in Calloway county. For comparison, in the Commonwealth of Kentucky, Finance and Insurance presents 3.57 percent of state employment and 4.63 percent of state income.

The elimination of 340 Finance and Insurance jobs would result in an additional 396 jobs lost in related industries. In terms of income, eliminating Finance and Insurance would amount to a direct income loss of \$11,291,498 plus an additional \$11,019,132 loss in other local sectors. Combining the direct, indirect and induced effects, then, measures the total impact of Finance and Insurance in the county.

Impact Analysis Results for Finance and Insurance*

	Employment	Income	Income per Employee
Direct Impact Measures the employment lost from the elimination of Finance and Insurance.	340	\$11,291,498	\$33,220
Indirect Impact Firms within Finance and Insurance will purchase at least some of their inputs from other firms located in the region, thereby causing the supplier firms to purchase resources and hire workers to meet this demand. These purchases from supplier firms are called the indirect impacts.	55	\$1,566,187	\$28,271
Induced Impact The personal income generated by the direct and indirect impacts will result in household spending in the study area; this household spending is called the induced impact.	340	\$9,452,945	\$27,770
Total Impact The sum of the direct, indirect and induced impacts.	736	\$22,310,630	\$30,322

**This analysis was performed using 2004 data and software (version 2.0.1025) from the Minnesota IMPLAN Group, Inc. All dollar values are expressed in 2004 dollars, employment numbers represent full-time equivalents (FTE), and industrial classifications are based upon the North American Industrial Classification System (NAICS).*

The Economic Impacts of Real Estate and Rental and Leasing in Calloway County, Kentucky

In 2004, combined Real Estate and Rental and Leasing employment in the county totaled 282 workers, generated \$5,907,437 in local income. As illustrated below, Real Estate and Rental and Leasing accounts for about 1.34 percent of county employment and 0.97 percent of county income in Calloway county. For comparison, in the Commonwealth of Kentucky, Real Estate and Rental and Leasing presents 2.73 percent of state employment and 1.51 percent of state income.

The elimination of 282 Real Estate and Rental and Leasing jobs would result in an additional 269 jobs lost in related industries. In terms of income, eliminating Real Estate and Rental and Leasing would amount to a direct income loss of \$5,907,437 plus an additional \$7,265,552 loss in other local sectors. Combining the direct, indirect and induced effects, then, measures the total impact of Real Estate and Rental and Leasing in the county.

Impact Analysis Results for Real Estate and Rental and Leasing*

	Employment	Income	Income per Employee
Direct Impact			
Measures the employment lost from the elimination of Real Estate and Rental and Leasing.	282	\$5,907,437	\$20,919
Indirect Impact			
Firms within Real Estate and Rental and Leasing will purchase at least some of their inputs from other firms located in the region, thereby causing the supplier firms to purchase resources and hire workers to meet this demand. These purchases from supplier firms are called the indirect impacts.	56	\$1,302,771	\$23,431
Induced Impact			
The personal income generated by the direct and indirect impacts will result in household spending in the study area; this household spending is called the induced impact.	213	\$5,962,781	\$27,968
Total Impact			
The sum of the direct, indirect and induced impacts.	551	\$13,172,988	\$23,894

*This analysis was performed using 2004 data and software (version 2.0.1025) from the Minnesota IMPLAN Group, Inc. All dollar values are expressed in 2004 dollars, employment numbers represent full-time equivalents (FTE), and industrial classifications are based upon the North American Industrial Classification System (NAICS).

The Economic Impacts of Professional, Scientific, and Technical Services in Calloway County, Kentucky

In 2004, combined Professional, Scientific, and Technical Services employment in the county totaled 442 workers, generated \$15,905,590 in local income. As illustrated below, Professional, Scientific, and Technical Services accounts for about 2.09 percent of county employment and 2.60 percent of county income in Calloway county. For comparison, in the Commonwealth of Kentucky, Professional, Scientific, and Technical Services presents 4.07 percent of state employment and 5.35 percent of state income.

The elimination of 442 Professional, Scientific, and Technical Services jobs would result in an additional 363 jobs lost in related industries. In terms of income, eliminating Professional, Scientific, and Technical Services would amount to a direct income loss of \$15,905,590 plus an additional \$9,567,186 loss in other local sectors. Combining the direct, indirect and induced effects, then, measures the total impact of Professional, Scientific, and Technical Services in the county.

Impact Analysis Results for Professional, Scientific, and Technical Services*

	Employment	Income	Income per Employee
Direct Impact Measures the employment lost from the elimination of Professional, Scientific, and Technical Services.	442	\$15,905,590	\$35,994

Induced Impact The personal income generated by the direct and indirect impacts will result in household spending in the study area; this household spending is called the induced impact.	269	\$7,302,292	\$27,186
Total Impact The sum of the direct, indirect and induced impacts.	805	\$25,472,776	\$31,655

*This analysis was performed using 2004 data and software (version 2.0.1025) from the Minnesota IMPLAN Group, Inc. All dollar values are expressed in 2004 dollars, employment numbers represent full-time equivalents (FTE), and industrial classifications are based upon the North American Industrial Classification System (NAICS).

The Economic Impacts of Management of Companies and Enterprises in Calloway County, Kentucky

In 2004, combined Management of Companies and Enterprises employment in the county totaled 3 workers, generated \$190,713 in local income. As illustrated below, Management of Companies and Enterprises accounts for about 13.21 percent of county employment and 20.79 percent of county income in Calloway county. For comparison, in the Commonwealth of Kentucky, Management of Companies and Enterprises presents 0.66 percent of state employment and 1.54 percent of state income.

The elimination of 3 Management of Companies and Enterprises jobs would result in an additional 4 jobs lost in related industries. In terms of income, eliminating Management of Companies and Enterprises would amount to a direct income loss of \$190,713 plus an additional \$120,235 loss in other local sectors. Combining the direct, indirect and induced effects, then, measures the total impact of Management of Companies and Enterprises in the county.

Impact Analysis Results for Management of Companies and Enterprises*

	Employment	Income	Income per Employee
Direct Impact			
Measures the employment lost from the elimination of Management of Companies and Enterprises.	3	\$190,713	\$76,285
Indirect Impact			
Firms within Management of Companies and Enterprises will purchase at least some of their inputs from other firms located in the region, thereby causing the supplier firms to purchase resources and hire workers to meet this demand. These purchases from supplier firms are called the indirect impacts.	1	\$23,669	\$26,299
Induced Impact			
The personal income generated by the direct and indirect impacts will result in household spending in the study area; this household spending is called the induced impact.	4	\$96,566	\$27,590
Total Impact			
The sum of the direct, indirect and induced impacts.	7	\$310,948	\$45,065

*This analysis was performed using 2004 data and software (version 2.0.1025) from the Minnesota IMPLAN Group, Inc. All dollar values are expressed in 2004 dollars, employment numbers represent full-time equivalents (FTE), and industrial classifications are based upon the North American Industrial Classification System (NAICS).

The Economic Impacts of Administrative and Support and Waste Management and Remediation Services in Calloway County, Kentucky

In 2004, combined Administrative and Support and Waste Management and Remediation Services employment in the county totaled 328 workers, generated \$4,500,727 in local income. As illustrated below, Administrative and Support and Waste Management and Remediation Services accounts for about 1.55 percent of county employment and 0.74 percent of county income in Calloway county. For comparison, in the Commonwealth of Kentucky, Administrative and Support and Waste Management and Remediation Services presents 4.98 percent of state employment and 2.73 percent of state income.

The elimination of 328 Administrative and Support and Waste Management and Remediation Services jobs would result in an additional 147 jobs lost in related industries. In terms of income, eliminating Administrative and Support and Waste Management and Remediation Services would amount to a direct income loss of \$4,500,727 plus an additional \$3,802,254 loss in other local sectors. Combining the direct, indirect and induced effects, then, measures the total impact of Administrative and Support and Waste Management and Remediation Services in the county.

Impact Analysis Results for Administrative and Support and Waste Management and Remediation Services

	Employment	Income	Income per Employee
Direct Impact			
Measures the employment lost from the elimination of Administrative and Support and Waste Management and Remediation Services.	328	\$4,500,727	\$13,722
Indirect Impact			
Firms within Administrative and Support and Waste Management and Remediation Services will purchase at least some of their inputs from other firms located in the region, thereby causing the supplier firms to purchase resources and hire workers to meet this demand. These purchases from supplier firms are called the indirect impacts.	51	\$1,173,279	\$23,142
Induced Impact			
The personal income generated by the direct and indirect impacts will result in household spending in the study area; this household spending is called the induced impact.	96	\$2,628,975	\$27,385
Total Impact			
The sum of the direct, indirect and induced impacts.	475	\$8,302,980	\$17,491

**This analysis was performed using 2004 data and software (version 2.0.1025) from the Minnesota IMPLAN Group, Inc.
